

ChatGPT & Apps

You're planning a trip and ask ChatGPT to find flights, add the best option to your calendar, and create a packing list — all without leaving the chat. Sounds like too much? ChatGPT's **Plugins** can help with that.

By the end of this lesson, you'll know how to connect the apps you already use and let ChatGPT take real actions on your behalf.

ChatGPT Got More Powerful

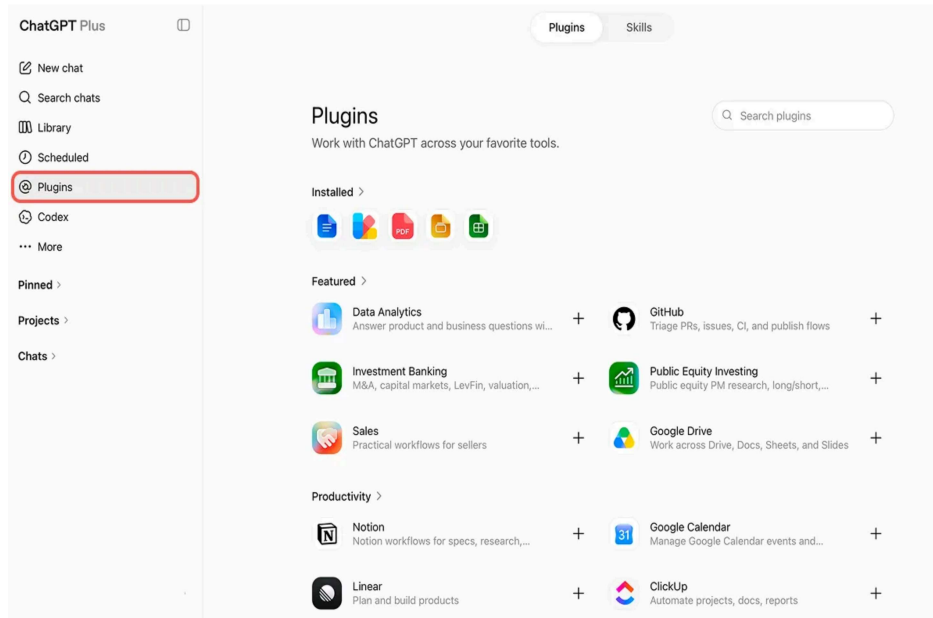

So far, ChatGPT has been answering your questions, helping you write, and thinking through problems with you. All of that happens inside the chat: it gives you text, and you do the rest.

Plugins change that. When you install a plugin, ChatGPT can **do things** in the real apps: search for flights, make a playlist, or build a design, all from inside the conversation.

Look at the left sidebar: you'll find **Plugins** there. A plugin can include apps, reusable skills, and app templates.

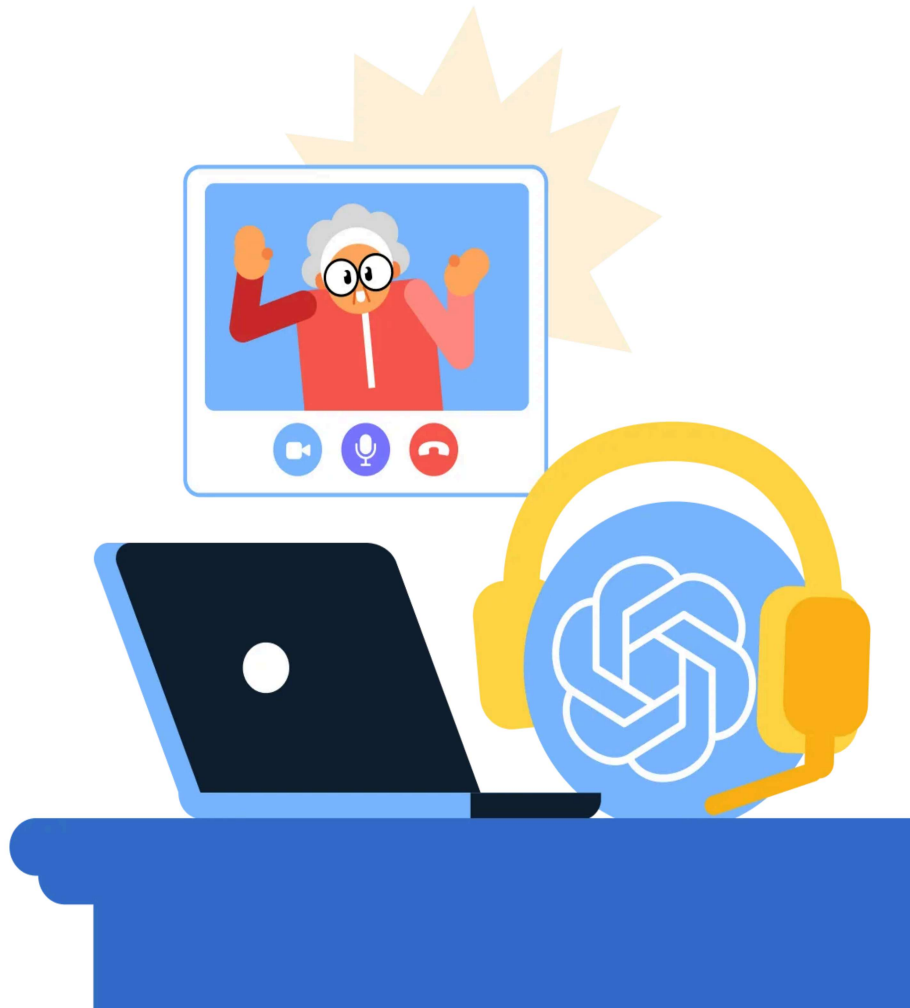

You can browse through apps in categories like Productivity, Creativity, Data & Analysis, Communication, and more, and connect the ones you want.

ChatGPT Alone vs. ChatGPT With a Plugin

Without a plugin installed, ChatGPT is like a friend who gives great advice — but you still have to make all the calls yourself. With Plugins connected, that same friend can **pick up the phone** for you. Let's see how it is different in practice.

✓ Task completed

Asking Without a Plugin

Ask ChatGPT to find the best budget hotel options in Sydney.

 Repeat task

ChatGPT gave you real hotel options with links to their websites. That's useful, but when your goal is to book a hotel, it's not enough.

Now let's connect a booking app and ask the Plugin the same question in the chat.

Plugins in Action

Connect **Booking.com** from the Plugins panel, then type your request.

✓ Task completed

Asking ChatGPT, With a Plugin

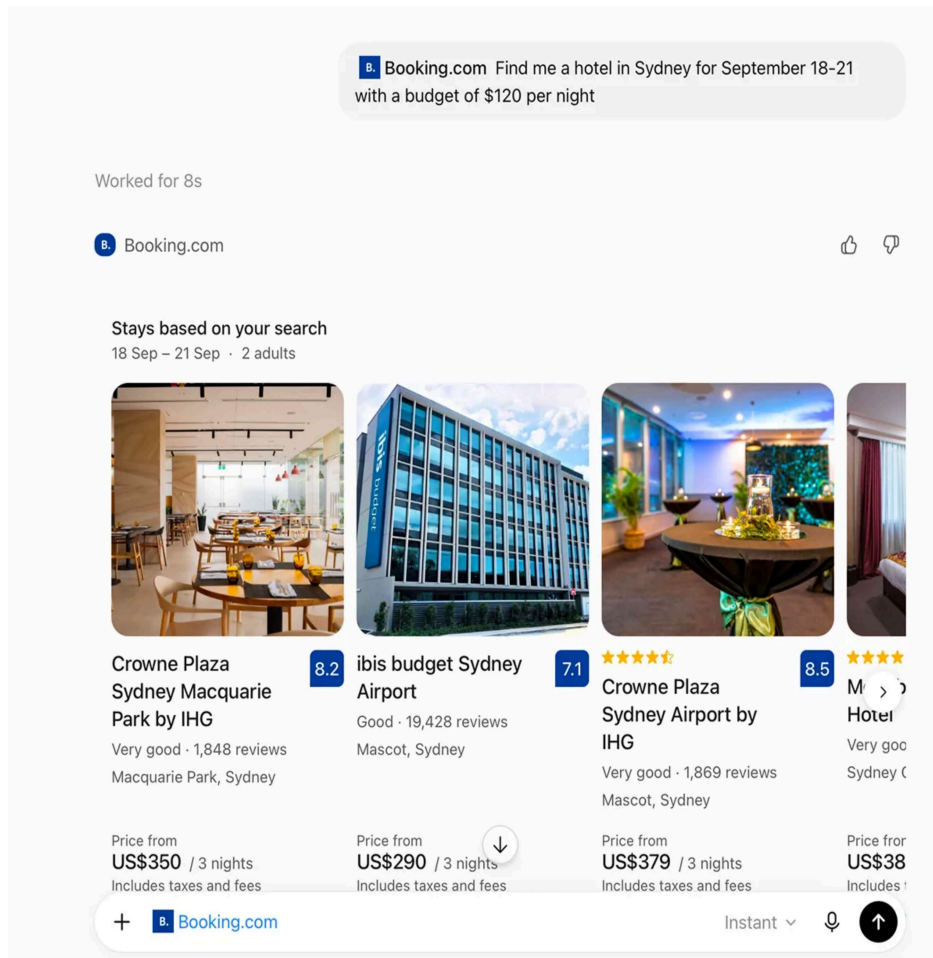

Ask ChatGPT to find a hotel in Sydney.

 Repeat task

ChatGPT's text tool did a good enough job: it pulled real hotel options with prices directly in the chat.

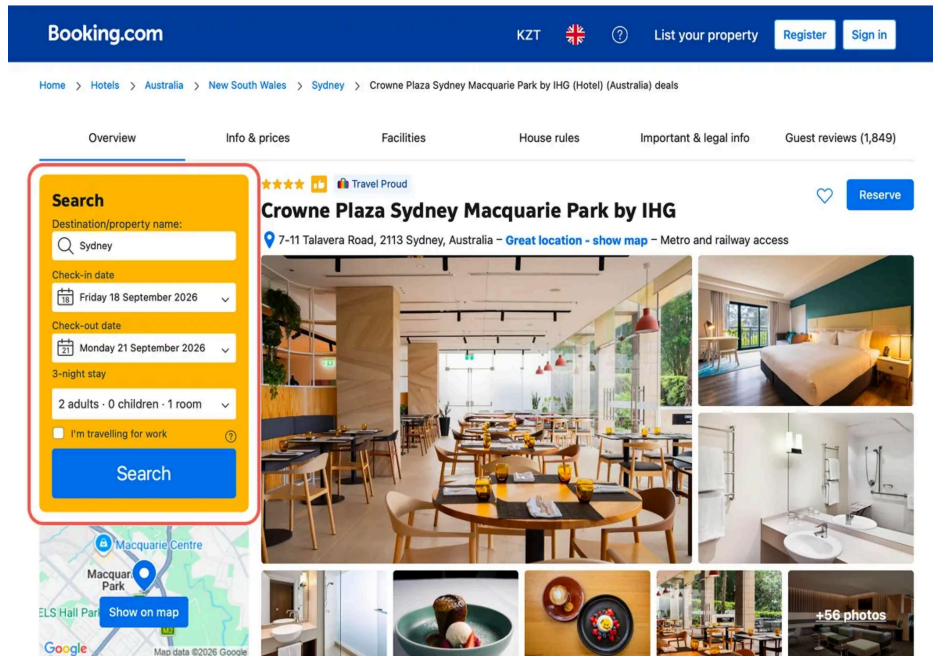

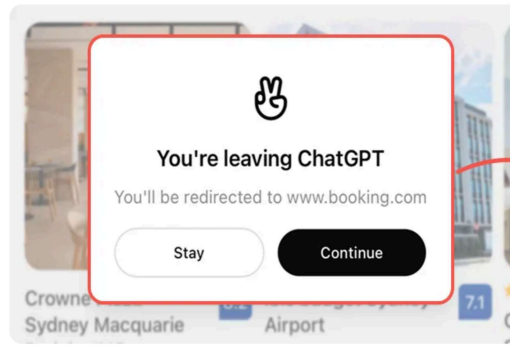

With the Booking.com app connected, you can search for hotels that match your specific criteria and refine

recommendations in a conversational way without having to start the search from scratch.

Coursiv

And if you like one of the options, just click *View on Booking.com* — it will redirect you straight to the app with all your search details already filled in, ready to book.

Coursiv

💡 Keep in Mind

- **Only connected apps work:** ChatGPT can't reach a tool you haven't linked.

Continue

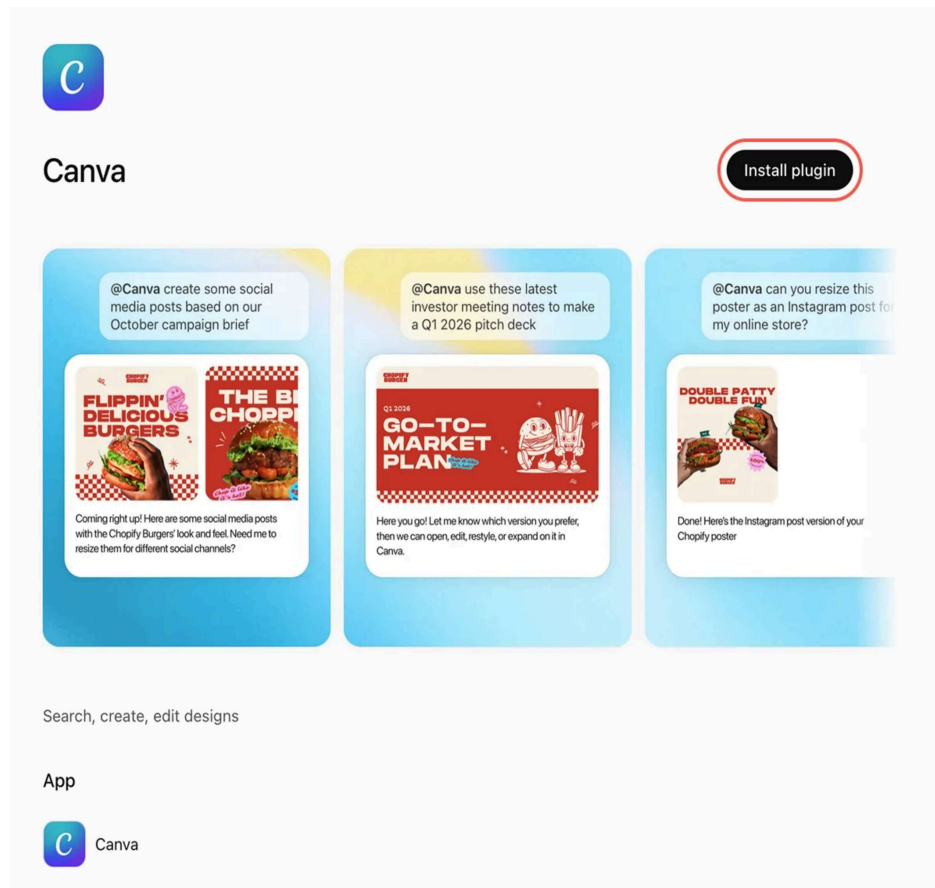

and create, but not access your private account data unless you've granted permission.

- **New apps are added regularly:** What's available today is just the beginning. It's worth checking what's new every few weeks.

Let's try another app, but this time for creation. Imagine you want to post a travel photo on Instagram and need an eye-catching visual to go with it — just ask Canva in

ChatGPT Plugins.

Connect Canva from the Plugins panel, then click *"Try in chat"* to ask it to create the visual directly in the chat.

Coursiv

✓ Task completed

Create a Design in Canva

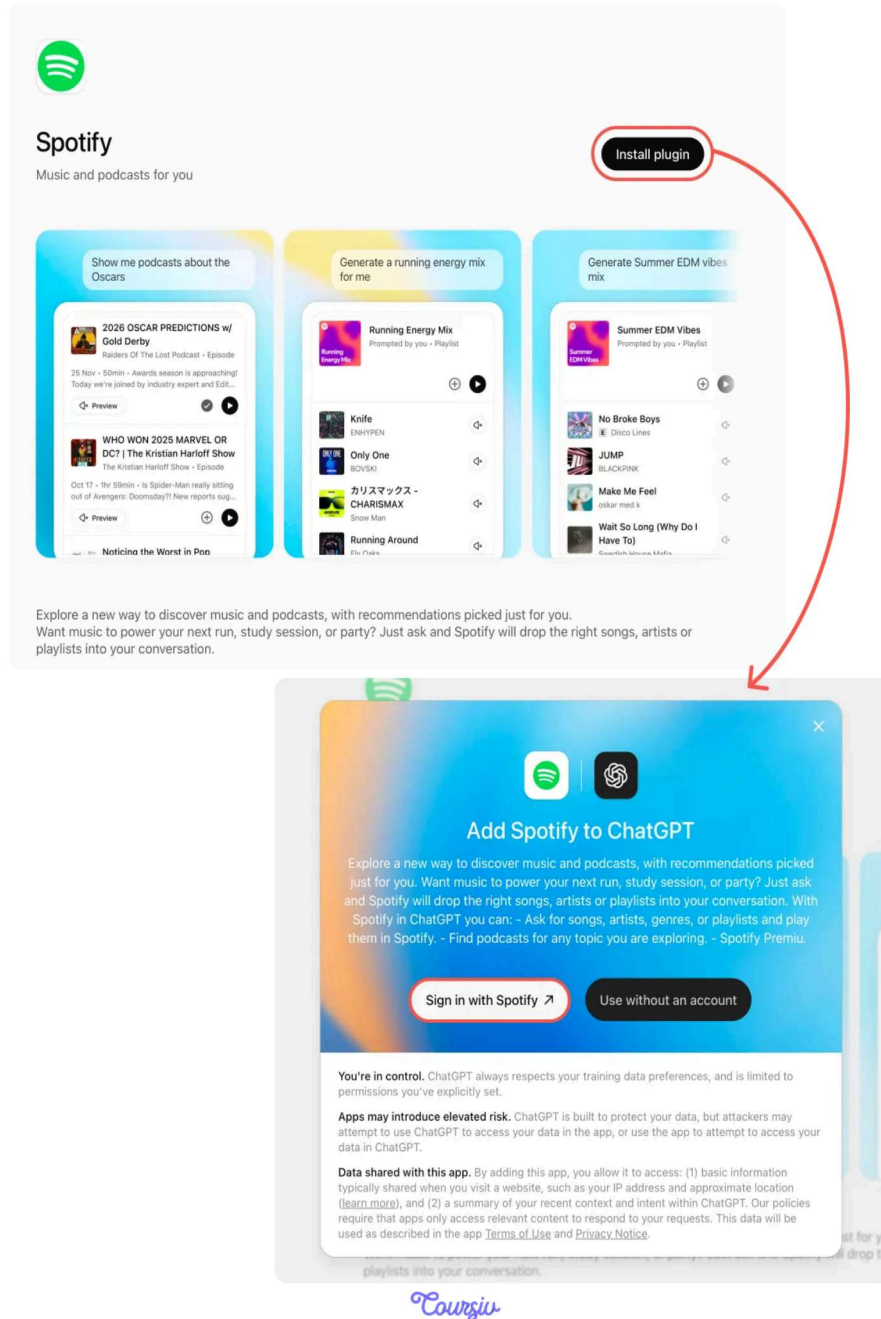

You need a post for your Instagram profile. Connect Canva and complete the prompt.

 Repeat task

Canva built a ready-to-use visual directly in the chat. If you want to edit one of the visuals, ChatGPT can take you to Canva to work on the design.

For a final task, let's connect an app you probably use every day — Spotify.

Connect it from the Plugins panel and ask ChatGPT to put on something that fits your mood.

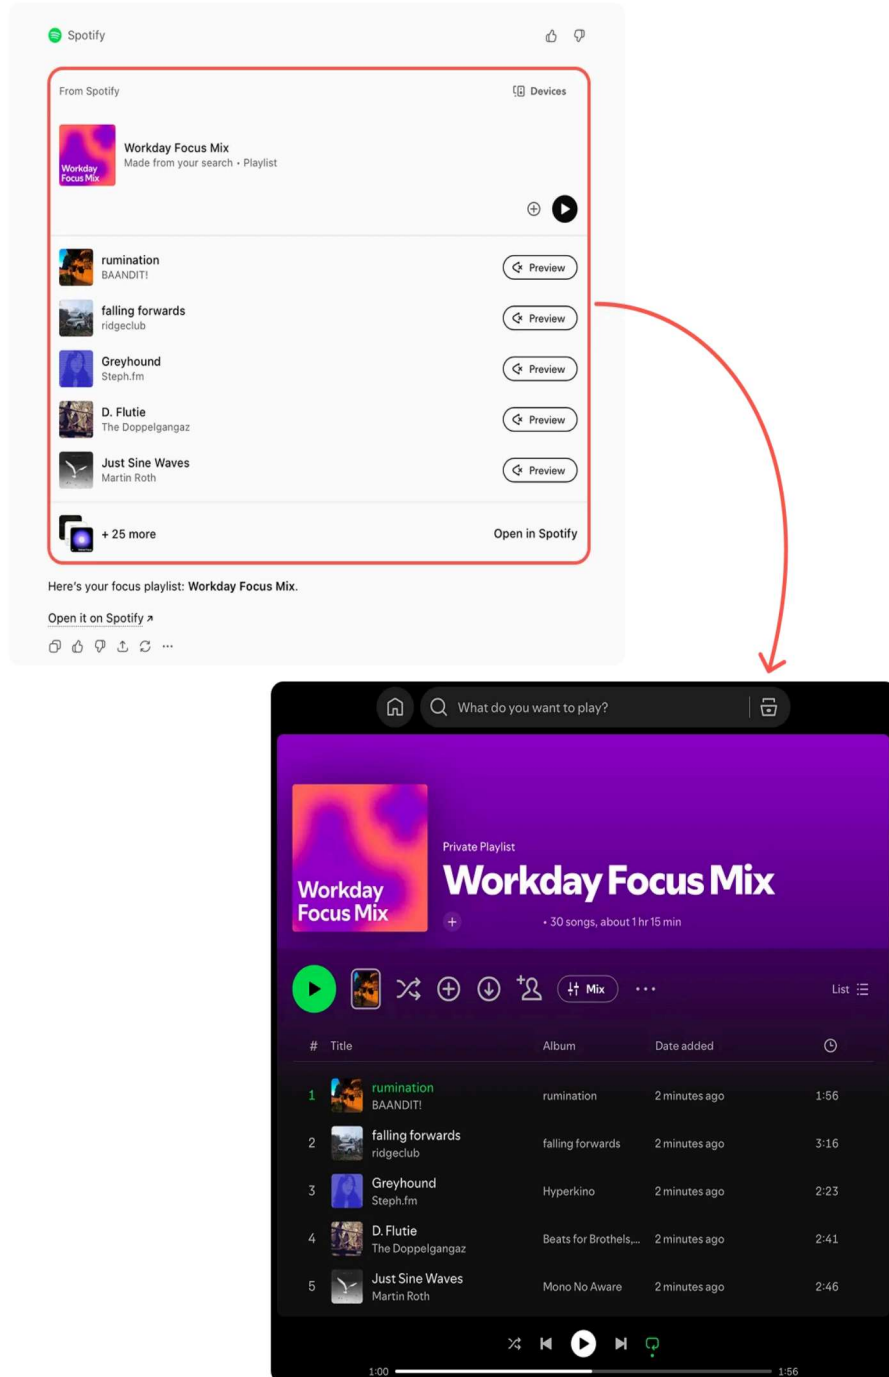

✓ Task completed

Try Spotify in Action

Connect Spotify and ask ChatGPT to play something based on your mood or activity.

 Repeat task

ChatGPT gives you a recommendation. Open the playlist in your Spotify app and enjoy!

Coursiv

✓ Task completed

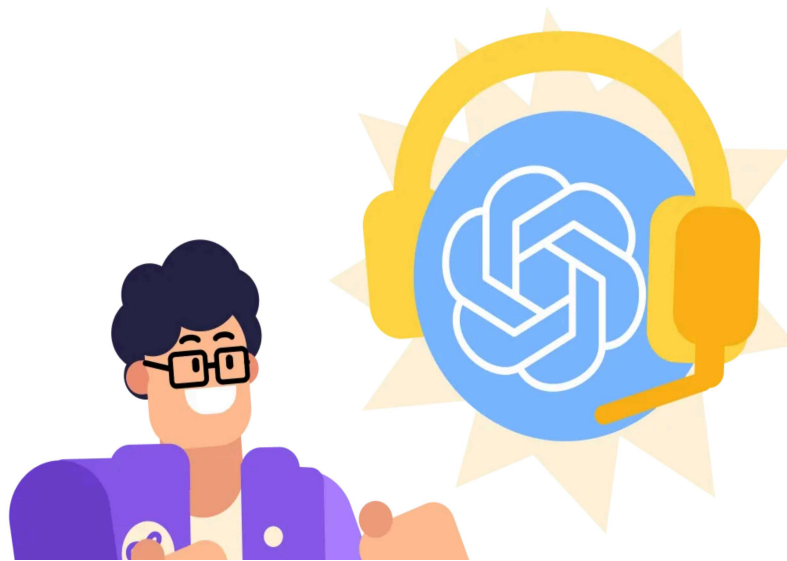

Using a Plugin From Start to Finish

Arrange the steps in the right order to show how installing and using a Plugin works.

 Repeat task

Great Work!

You've just seen what ChatGPT can do when it's connected to the tools you already use — it stops being just a chat and starts being an assistant that acts in your daily life.

Key Takeaways

- **Plugins turn ChatGPT from a text tool into a connected assistant.** It can take real actions inside Spotify, Booking.com, Canva, and more.
- **You describe the outcome, and ChatGPT figures out the steps.** There's no need to switch tabs or do it yourself.
- **More plugins are added regularly.** It's worth checking what's new — today's limitation might be gone next week.
