

ARTIFICIAL INTELLIGENCE

Lecture 1

Assignments, Classroom Discussion, Group Activities & Homework

Module 9 Learning Outcomes

- Reinforce concepts learned in Lecture 1.
- Promote collaborative learning through activities.
- Develop observation and critical thinking.
- Connect AI concepts with everyday life.

Activity 1: AI Around Me

Duration: 5 minutes

to write five AI applications used from morning until they reached the university. Invite students to explain why each example is actually AI.

Activity 2: Group Brainstorming

Divide the class into five groups.

Assign one sector to each group:

1. Healthcare
2. Education
3. Agriculture
4. Banking
5. Transportation

Each group identifies at least five AI applications and presents them in two minutes.

Activity 3: Think-Pair-Share

Question: 'Can Artificial Intelligence ever replace human intelligence completely?'

Mini Case Study

Case: A hospital introduces an AI system to detect diseases from X-ray images.

Discussion Questions:

- What are the advantages?
- What are the risks?
- Should the final decision always be taken by a doctor?

Conclude that AI supports experts but human judgment remains essential.

Assignment 1

Title: Artificial Intelligence in My Daily Life

Write a 2-page report identifying at least 20 AI applications used in one day. For each application mention:

- Where it is used

- What problem it solves
- What type of intelligence it demonstrates

Assignment 2 (Research Based)

Prepare a presentation (5–7 slides) on one AI application in any domain such as Healthcare, Finance, Agriculture, Education, Defense or Space Technology.

Assignment 3 (Mathematics Connection)

Prepare a table showing how Logic, Probability, Linear Algebra, Statistics, Optimization and Graph Theory contribute to Artificial Intelligence.

Homework

1. Define Intelligence in your own words.
2. Define Artificial Intelligence.
3. List 25 real-life AI applications.
4. Compare Traditional Programming and AI.
5. Write the difference between ANI, AGI and ASI.
6. Explain why Mathematics is important in AI.
7. Identify one AI application used in Cyber Security.

Reflective Learning Questions

- What surprised you most in today's lecture?
- Which AI application do you use most often?
- Which topic would you like to explore further?
- How do you think AI will change your future career?

Extension Activity

Ask students to install or explore one AI tool (e.g., ChatGPT, Google Lens, Google Translate, Microsoft Copilot or Gemini) and prepare a one-page reflection on how it uses AI.
